

MOAZZAM ANWER

SENIOR SOFTWARE ENGINEER

New Delhi, Delhi, India | moazzam.anwer@gmail.com | 7651900385

PROFILE

Senior Software Developer, offering 8 years of experience in demanding environments focused on producing cutting-edge systems for the IT industry. Skilled in directing development with creative and performance-oriented approach. Well-organized and customer-focused with proven skills in project development and team leadership.

WORK EXPERIENCE

Software Engineer, Neosoft technology

Mar 2021 to Present

Noida

- Implemented multi-language support in SonyLIV project, enabling users to select their preferred language and ensuring persistent language preferences across sessions.
- Migrated the 2 lakh plus data from Mysql to the new Mongo collection by making scripts.
- Moved data to ELK , to provide the Elastic search for the articles.
- Created a script in python to upload lakhs of flash coupon on the Production mongo DB from a csv file.

Software Engineer, Appinventiv

Mar 2018 to Mar 2021

Noida

- Applied logic to show the shuttle on map and move the shuttle on the basis of the tracker data received for the different shuttles and showing ETA of the shuttles, while working with a team of 5 members.
- Designed logic to show the detailed analytics giving the proper insights in the high charts to solve the problem of customers which increased the sales of client by 20% .
- Optimized the DB query by 20% using joins and made index on some of the fields which were used intensively.
- Made REST API for the Driver APP in nodejs to consume on Driver App which helped the client to get 10% more revenue.

ORGANIZATIONS

Neosoft Technology

Mar 2021 to Present

New Delhi, India

Appinventiv

Mar 2018 to Mar 2021

TECHNICAL SKILLS

Nodejs
Redis
Javascript
JWT

MongoDB
SOCKET.IO
GIT
DOCKER

Mysql
Rest API
EXPRESS JS

Elastic search
AWS (EC2, LAMBDA, SNS,
S3)
REACTJS

EDUCATION

United Institute of Management

Jul 2015 to Jun 2018

MCA, Prayagraj

PostGraduated with Hons.

PROJECTS

SonyLIV (OTT Streaming Platform)

Oct 2024 to Present

TCS, Noida

- Worked on a large-scale OTT platform serving millions of users with content across **-Movies, TV Shows, and Originals.**
- Implemented **-multi-language support**, enabling users to select their preferred language and ensuring persistent language preferences across sessions.
- Fixed critical production bugs and performance issues, improving overall platform stability and user experience.
- Enhanced backend reliability by optimizing caching and search workflows using **-Redis and Elasticsearch.**
- Increased automated test case coverage by **~20%**, improving code quality and reducing regression issues.
- Built and maintained scalable backend services using Node.js and AWS Lambda in a cloud-native environment.

Technology used:Node.js, Redis, Elasticsearch, AWS Lambda

Otplay

Nov 2022 to Sept 2024

- This project is a entertainment portal which shows News, Review ,Movies and Shows related article to the users, also user can purchase plans to view multiple OTT's and watch from this portal.
- **Challenges Faced:**To create the flash sales functionality and make the recurring payment of user by taking the mandate from the user.
- **Technology used:**NODEJS, MongoDB, REDIS, REACTJS,ELASTIC SEARCH,RAZOR PAY.

Desimartini

Mar 2021 to Oct 2022

This project is a entertainment portal which shows News, Review ,Movies and Shows related article to the users, this project already exists but the client decided to revamp the portal with the new tech stack. Challenges Faced: 1.To migrate the old Mysql data to the new Mongo collection. 2.To create the logic of trending articles and give the ability to reset the trending duration to admin. 3. To preserve the old url format for the new desimartini articles. Technology Used: NODEJS, MongoDB, REDIS, REACTJS.

TrackMyShuttle

Mar 2019 to Mar 2021

This project is a live tracking solution for the shuttles which basically picks the passengers from the airport and drops them to the hotel.In this the shuttle has a physical tracker which sends a UDP data on every 5 seconds to our server using ATNT service provider and on our server we used to fetch that info and parse it to find out the position of the shuttle. Challenges Faced: 1..Changing the DB structure because of some of the limitations and making script to migrate the old data into the new architecture. 2. To show the shuttle on map and move the shuttle on the basis of the tracker data received for the different shuttles and showing ETA of the shuttles. Technology used: PHP (Codeigniter) , MySQL, NODEJS, MongoDB, REDIS, SOCKET, GOOGLEMAPS API,AWS services.

Sylyfe

Sept 2018 to Mar 2019

This project was an bridge between seller and buyer, where seller used to sell the handcrafted items to the buyers, it has a market place section where the seller can see the items based on his/her preference and can purchase the same. Technologies used : PHP, POSTGRE, LARAVEL. Role : Worked on the ADMIN and WEB panel of the portal where i have to manage the user registration using social login also made the api for the IOS APP and android APP to show the sellers on the dashboard once buyers successfully logged in.
